

SEVEN SPOT LADYBIRD

- Seven-spotted ladybirds, or ladybugs are commonly red or orange with three spots on each side and one in the middle; they have a black head with white patches on each side.
- They're considered useful insects, because they prey on agricultural pests such as aphids or scale insects.
- A common myth is that the number of spots on the insect's back indicates its age; while the pattern and colouration are actually determined by the species and genetics of the beetle.

Power: 110 VAC 60 Hz @ 2.1 Amps

Compressed Air: 3.5 CFM refrigerated (dry) @ 110 PSI

Weight: 600 lbs. (273 kg) (approx.)

Overall length: 8'4" (2.54 m), Length off the front: n/a, Length off the back: 1'4" (.41 m)
